

Article 12: I have a right to be listened to and taken seriously.

Article 28: I have a right to an education.

Article 29: I have a right to be supported to achieve in education.

Article 31: I have a right to relax and play. _

Pipworth Community Primary School Calculation Policy

Vision (Intent)

This policy has been developed to promote a common approach to supporting young people in developing their skills, knowledge and understanding of numerical calculations. Through this policy we aim to inspire and engage children to be more confident with numbers and should be used alongside the Mathematics PoS from National Curriculum as well as the schools progression documents. Children are introduced to the processes of calculation through practical, oral and mental activities. As children begin to understand the underlying ideas, they develop ways of recording to support their thinking and calculation methods, using particular methods that apply to special cases, and learn to interpret and use the signs and symbols involved.

As we are developing a Mastery approach to the teaching and learning of Mathematics it will be expected that children in all phases will have access to manipulatives and jottings alongside the introduction of these more formal written methods in order to promote the understanding of new mathematical concepts.

Children in all phases should have the opportunity to solve a range of missing box questions for each operation, including missing boxes where the equals sign is used in different places. Children will have opportunities to practise methods of calculation as well as opportunities to apply and reason with these skills before solving more complex problems and investigations.

Children in all phases should also have the opportunity to be using all 4 operations through a variety of word problems as well as opportunities to apply their knowledge into reasoning type questions as well as mathematical investigations. Children should be able to answer 'Prove it' reasoning questions using a learnt method of calculation.

It is expected that children will have a sound grasp of counting and place value in order to work more fluently within each operation so a counting and place value strand has been added to the policy. We will need to use consistent vocabulary and notation – HTO (Hundreds, Tens, Ones) and when using longer written methods the calculation symbol should be on the left hand side.

We all want our children to achieve excellence in mathematics no matter what their starting points are in order to compete with others on a level playing field. All pupils to have the opportunity to experience success in learning and to excel. Children may move between the given phases within a lesson or block of lessons in order to access the learning and fully understand the concept.

The overall aim is that when children leave primary school they:

- have a secure knowledge of number facts and a good understanding of the four operations;
- are able to use this knowledge and understanding to carry out calculations mentally and to apply general strategies when using one-digit and two-digit numbers and particular strategies to special cases involving bigger numbers;
- make use of diagrams and informal notes to help record steps and part answers when using mental methods that generate more information than can be kept in their heads;
- have an efficient, reliable, compact written method of calculation for each operation that children can apply with confidence when undertaking calculations that they cannot carry out mentally;
- Use a calculator effectively, using their mental skills to monitor the process, check the steps involved and decide if the numbers displayed make sense.

Updated November 2025

Due to be updated November 2026

SUBTRACTION

Mental Strategies	<p>Give 1 more/ 1 less than any given number.</p> <p>Know the biggest number should come first</p> <p>Recall and use addition and subtraction facts to 10 and then 20</p>	<p>Phase 1 and... Know that addition can be done in any order but subtraction cannot.</p> <p>Able to count in 2s, 3s, 5s and 10s from 0 and in tens from any number forwards or backwards.</p> <p>Recall and use addition and subtraction facts to 20 and 100 off by heart. Compare and order numbers from 0 to 100, use < > and =</p>	<p>Phase1, 2 and...</p> <p>Mentally find 10 or 100 (more or) less than any given number.</p> <p>Mentally find 10 or 100 (more or) less than any given number.</p> <p>Subtract numbers mentally, including – 3 digit number to ones, 3 digit number to tens, 3digit numbers to hundreds.</p>	<p>Phase 1, 2 3 and... Find 1000 (more or) less than any number.</p> <p>Able to subtract multiples of 1000, 100, 10 and 1 mentally (O+O, T+T) using different mental strategies. Secure understanding of place value. Subtract numbers mentally up to 4 digit numbers.</p>	<p>Able to subtract any multiples mentally – HTO and ThHTO using different mental strategies.</p> <p>Use negative numbers with subtraction calculations</p>
--------------------------	--	---	--	---	---

Recording	<p>Introduce - = symbols</p> <p>Subtractions recorded horizontally. Use of number line.</p> <p>Represent and use number bonds and related subtraction facts up to 20. Use of number line and use of concrete apparatus.</p> <p>Teach children to put the biggest number first.</p>	<p>- = using larger numbers.</p> <p>Subtractions recorded horizontally. Use of number line.</p> <p>OR</p> <p>Partition second number.</p> <p>$37 - 12 = 37 - 10$ $= 27 - 2$ $= 25$</p> <p>Subtract- Two digits to ones Two digits to tens, Two two digit numbers, three one digit numbers</p> <p>Show that addition can be done in any order but subtraction cannot.</p> <p>Use missing boxes to show relationship between + and -</p>	<p>Number lines – counting up or back to find totals.</p> <p>Column subtraction with carrying tens.</p> $\begin{array}{r} 51 \\ 64 \\ - 26 \\ \hline 38 \end{array}$ <p>Solve 1 and 2 problems including missing number problems.</p>	<p>Column subtraction – including borrowing, extend to larger numbers up to thousands.</p> $\begin{array}{r} 15 \\ 165 \\ - 37 \\ \hline 128 \end{array}$ $\begin{array}{r} 9.42 \\ - 6.78 \\ \hline 2.64 \end{array}$ <p>Solve 2 step problems including missing number problems</p>	<p>Column subtraction – extend to any number of digits and decimals up to 3 places.</p> <p>i.e.</p> $\begin{array}{r} 154.35 \\ - 93.34 \\ \hline 61.01 \end{array}$ <p>$3.657 - 1.394 = 2.273$</p> <p>Use 0 as place value holder when subtracting, including decimals</p>
------------------	--	---	--	---	--

MULTIPLICATION

Mental Strategies	<p>Know that multiplication can be done in any order.</p> <p>Begin to know some multiples of 2, 5 and 10.</p> <p>To know doubles up to 20</p>	<p>Recall and use multiplication facts for 2, 3, 5, and 10 including recognising odd and even numbers and know them off by heart and use this knowledge to solve simple problems</p> <p>Solve empty box questions</p>	<p>Recall and use multiplication facts for 2, 3, 4, 5, 8 and 10</p> <p>Able to multiply a single digit by a multiple of 10 e.g. $50 \times 6 = 300$</p> <p>Able to multiply a single digit by two-digit number.</p> <p>Solve 1 and 2 step problems including missing number problems</p>	<p>Know and recall multiplication facts up to 12×12</p> <p>Use place value, known derived facts to multiply (and divide) mentally, including multiplying by 0 and 1, multiplying 3 numbers together.</p> <p>Recognise and use factor pairs and commutativity in mental calculations.</p>	<p>Know multiplication facts up to 12×12</p> <p>If we were answering 7.2×3.8, we would make a note of how many digits in total are after the decimal point.</p> <p>Be able to multiply by 10, 100 and 1000, including decimals.</p> <p>Identify multiples and factors including finding all factor pairs of a number and common factors of 2 numbers</p> <p>Be able to identify prime number factors</p> <p>Recognise squared and cubed numbers using correct notation 2^2 4^3</p>
--------------------------	---	---	---	--	--

Recording

Vertically as repeated addition e.g. $2 + 2 + 2$

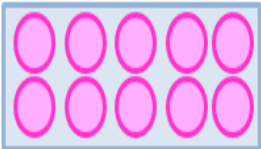

Multiplications recorded through use of concrete apparatus, jottings, pictorial representations, and arrays with support.

Multiplication recorded horizontally
e.g. $7 \times 2 = 14$

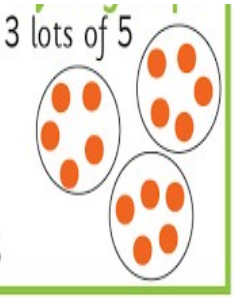

Multiplications recorded through use of concrete apparatus, jottings, pictorial representations, and arrays.

Repeated addition

Be able to draw arrays 5×2

Be able to group 3×5 and draw

Partitioning -

$23 \times 3 =$
 $20 \times 3 = 60$
 $3 \times 3 = 9$
 $60 + 9 = 69$

Written short methods –

$$\begin{array}{r} 1\ 24 \\ \times\ 6 \\ \hline 744 \\ 2 \end{array}$$

Be able to multiply 3 numbers

$2 \times 4 \times 5 =$

Be able to multiply 2,3,4 digit numbers by 1 digit using a formal written method

$$\begin{array}{r} 123 \\ \times\ 4 \\ \hline 492 \\ 1 \end{array}$$

$$\begin{array}{r} 1256 \\ \times\ 7 \\ \hline 8792 \\ 1\ 3\ 4 \end{array}$$

Be able to multiply 3 and 4 digit numbers with up to 2 decimal places by 1 digit and two digit numbers and decimals

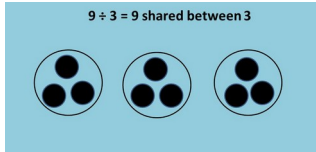

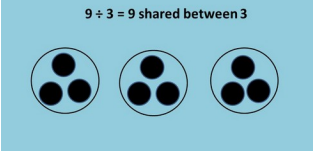

$$\begin{array}{r} 124 \\ \times\ 26 \\ \hline 2480 \\ 744 \\ \hline 3224 \\ 11 \end{array}$$

$3.72 \times 2.4 =$ to know there will be 3 digits after the decimal point.

Solve multi-step problems involving multiplication and division including their knowledge of factors, squared numbers and cubed numbers

DIVISION

Mental Strategies	Begin to know some division facts for 2, 5 and 10.	Able to count in/ divide by 2, 3, 5 and 10, off by heart.	Recall and use division facts for 2, 3, 4, 5, 8 and 10	Know division facts up to 12 x 12	Divide by 10,100, 1000 and 100,000 including decimals.
	To know half of each even number up to 20		Able to divide a single digit by a multiple of 10 e.g. 60 divided by 6 = 10 Able to divide a two-digit number by single digit. Solve problems including missing number problems	Use place value, known derived facts to divide (and multiply) mentally, including dividing by 0 and 1, dividing 3 numbers together. Recognise and use factor pairs and commutativity in mental calculations.	Know division facts up to 12 x 12 quickly off my heart.

Recording	<p>Recording using pictures/markings</p> <p>$9 \div 3 =$</p>  <p>Divisions recorded through use of concrete apparatus, jottings, pictorial representations, and arrays with support</p>	<p>Divisions recorded horizontally e.g. $6 \div 2 =$</p> <p>Calculations to be written either side of the equality sign so that it is not just interpreted as 'the answer'.</p> <p>Divisions recorded through use of concrete apparatus, jottings, pictorial representations, and arrays.</p> 	<p>Short division (bus stop)</p> <p>With 2 and 3 digit numbers, including remainders</p> $\begin{array}{r} 12 \\ 3 \overline{) 36} \end{array}$	<p>Short division (bus stop)</p> <p>With 3 and 4 digit numbers divided by T + O</p> <p>Use remainders</p> $\begin{array}{r} 36 \\ 7 \overline{) 254} \end{array}$ $\begin{array}{r} 20r6 \\ 12 \overline{) 246} \end{array}$	<p>Short division (bus stop)</p> <p>With 3 and 4 digit numbers with decimal places divided by T + O</p> <p>Use decimals</p> $\begin{array}{r} 10.2 \\ 11 \overline{) 112.2} \\ 20.5 \\ 12 \overline{) 246} \end{array}$ <p>Extend to long division- 432 divided by 15</p> $\begin{array}{r} 28.8 \\ 15 \overline{) 432} \\ \underline{30} \\ 132 \\ \underline{120} \\ 12.0 \\ \underline{12.0} \\ 0 \end{array}$ <p>Interpret remainders appropriately for the context including as fractions, decimals or rounding</p>
